

Lab Tutorial: Conservation Planning in Antarctica

Wen Wen, Mike Bode, Kerrie Wilson

2023 SAEF Annual Conference: Conservation Planning in Antarctica

SAEF

Securing Antarctica's Environmental Future

Australian Research Council Special Research Initiative

Australian Research Council Special Research Initiative

Outline

Introduction – 5 minutes

Data – 15 minutes

Gap Analysis – 15 minutes

Prioritizations – 20 minutes

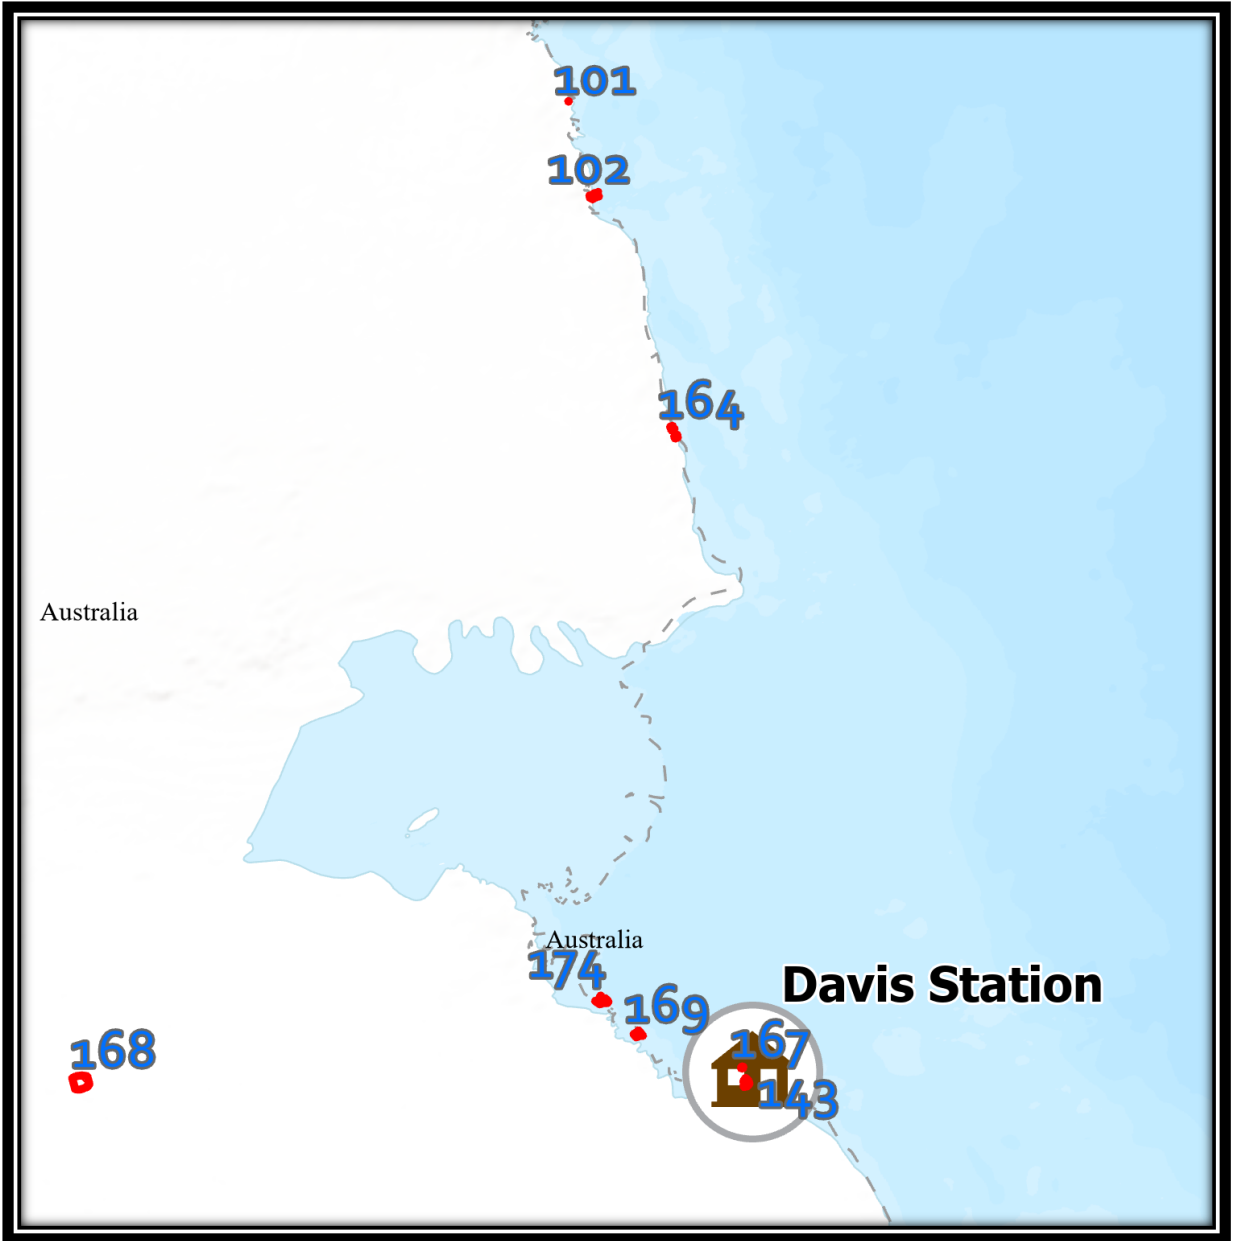

Conclusion – 5 minutes

Learning Objectives

- To understand the core principles of conservation planning.
- To provide the knowledge base to conduct conservation planning analyses.

1. Introduction

- You are playing the role of a conservation planner, for which you have been tasked by the Antarctic Scientific Committee to evaluate the existing system of protected areas in the Australian Antarctic Territory (AAT), which are in Antarctic Conservation Biogeographic Regions (ACBR's) 7 and 16.
- You will be using the prioritizr R package as a decision support tool for spatial conservation prioritization.
- Your task is to find new conservation areas that will protect the species of interest, while minimizing the overall cost.

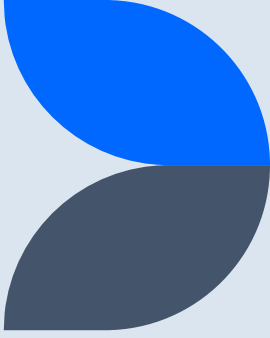

Conservation Planning in Antarctica

Rmarkdown (.rmd) + Tutorial Data

The data for this tutorial has been provided in this [google drive link](#). After downloading the LabTutorial.zip, extract the files into a folder and titled “LabTutorial” folder.

DATA USE RESTRICTION AND DISCLAIMER

THIS LAB TUTORIAL DATA IS INTENDED ONLY FOR TRAINING PURPOSES AND NOT FOR FURTHER SCIENTIFIC PUBLICATION OR ANY LEGAL CLAIMS. THE DATA HEREIN HAS BEEN OBTAINED FROM SOURCES BELIEVED TO BE RELIABLE, BUT ITS ACCURACY AND COMPLETENESS, AND THE OPINIONS BASED THEREON, ARE NOT GUARANTEED.

- 
- ✓ Open the **RStudio** application
 - ✓ Click Menu '**File**' and **Open Project...**
\LabTutorial\ConsPlan_Antarctic.Rproj
 - ✓ Navigate to the **Files tab** to open the **Index.Rmd** file and switch from the **source panel** to the **Visual panel** on the markdown.
 - ✓ If you haven't installed any library packages yet, don't worry about the error warning on the console. Simply click on the "**R packages**" option in **section 1.3** or follow the warning message if some packages are required. If you've already installed the packages, feel free to skip ahead to **section 1.4** to load them.

Decision

Species Y
Target = 25%

**Selected
 (1)**

**Not
 Selected
 (0)**

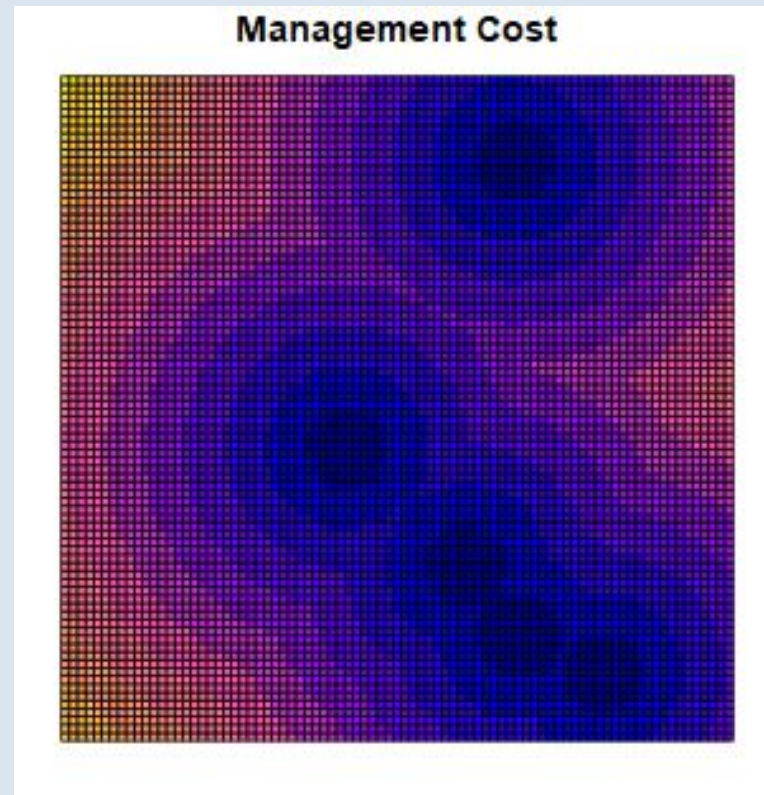

Now consider.....

Two types of cost scenarios

No Cost or equal cost – Assuming that land in Antarctica does not need to be purchased.

Management costs – The distance of new PAs from the nearest station, reflecting monitoring costs or administration costs.

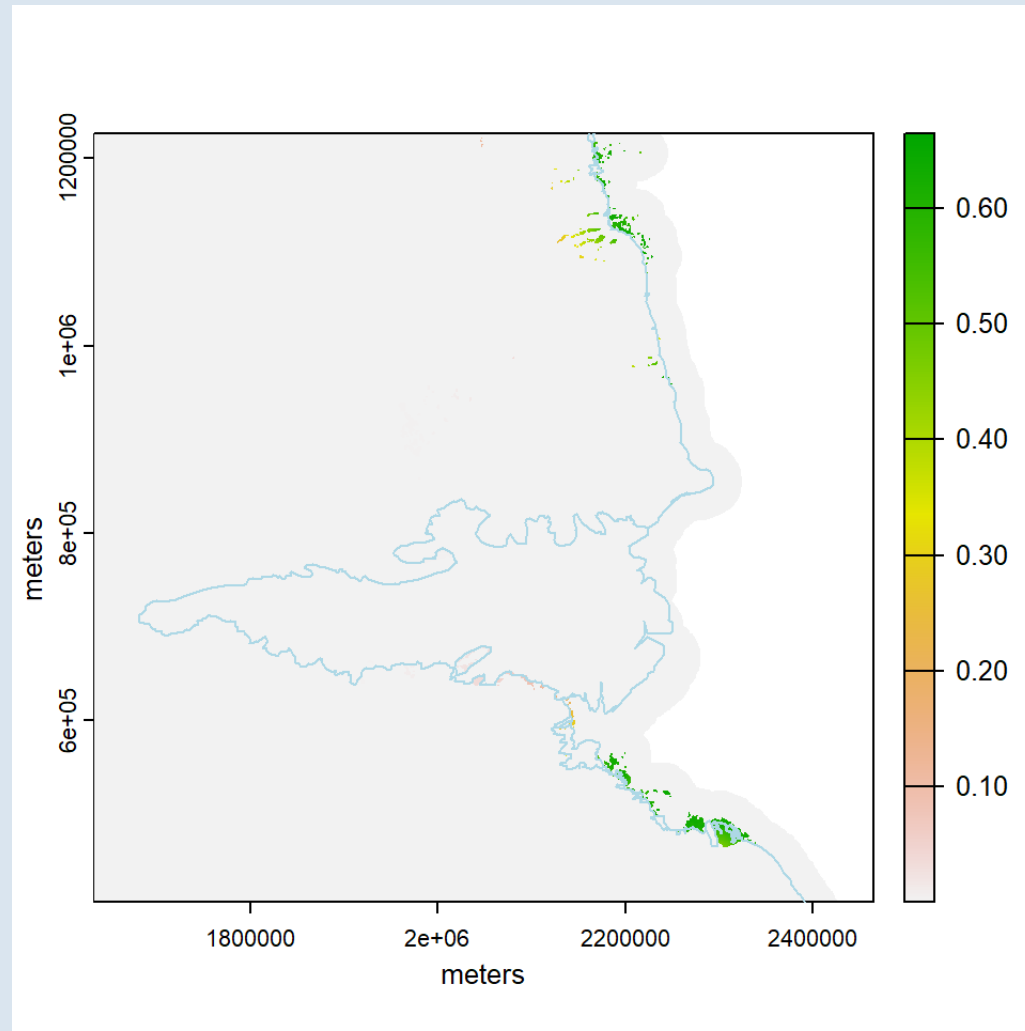

2. Data

- ✓ Please click on  “Run Current Chunk” **section 2.1** to import the planning unit layer.
- ✓ Next, click on **section 2.2** to format column in planning unit data.
- ✓ Then, plot the planning unit layer on **section 2.3** and you will see **PU ID, Cost Layers, Status, Locked In, and Locked Out.**

Species Data

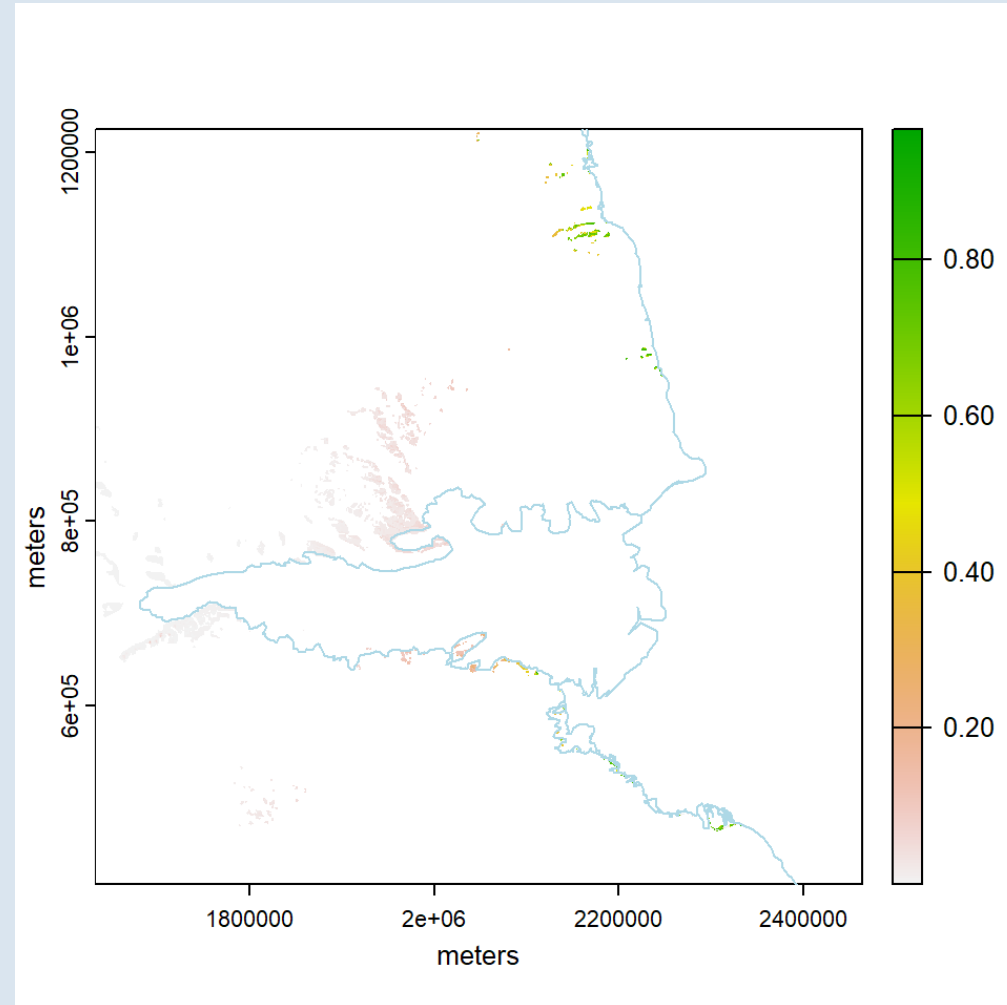

- ✓ Please click on **section 2.4.1** to import the Skua raster.

Todd, I. 2021

Species Data

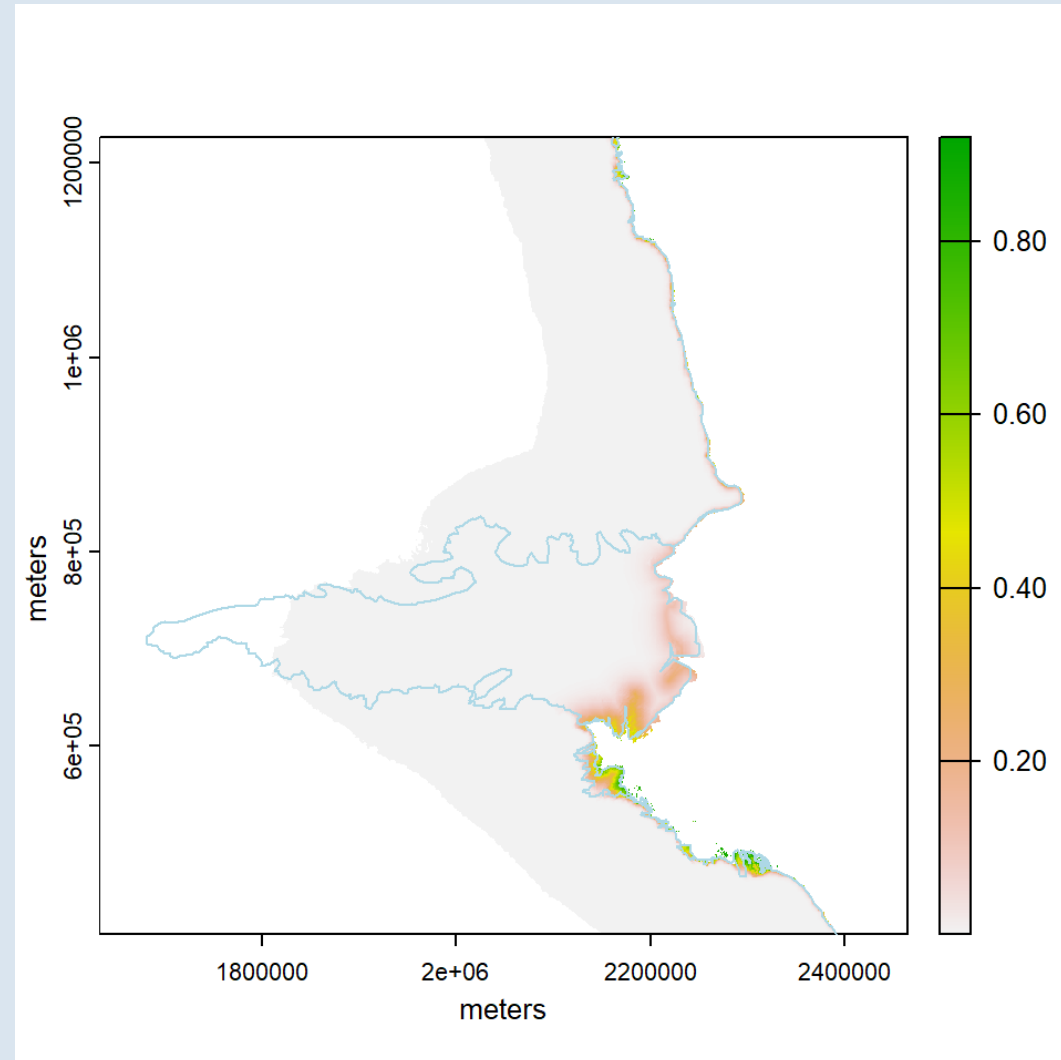

- ✓ Please click on **section 2.4.2** to import the Moss raster.

Todd, I. 2021

Species Data

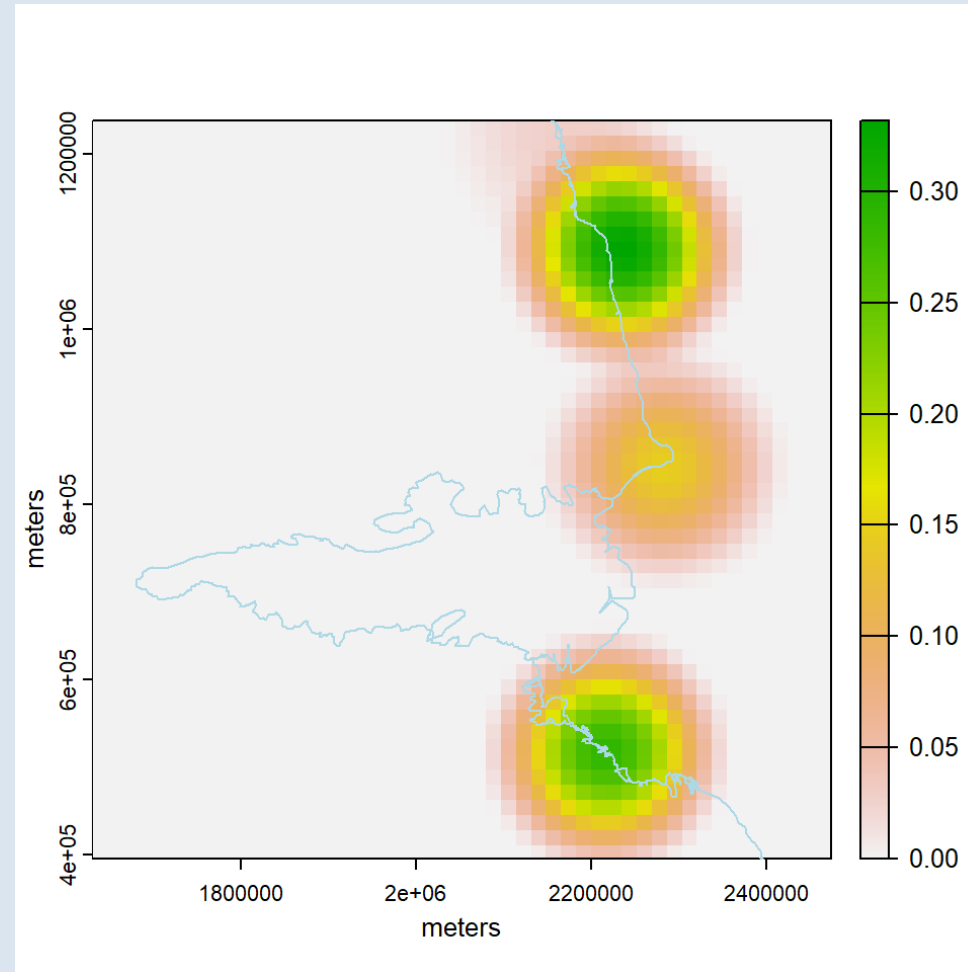

- ✓ Please click on **section 2.4.3** to import the *Usnea* raster.

Todd, I. 2021

Species Data

- ✓ Please click on **section 2.4.4** to import the Emperor raster.

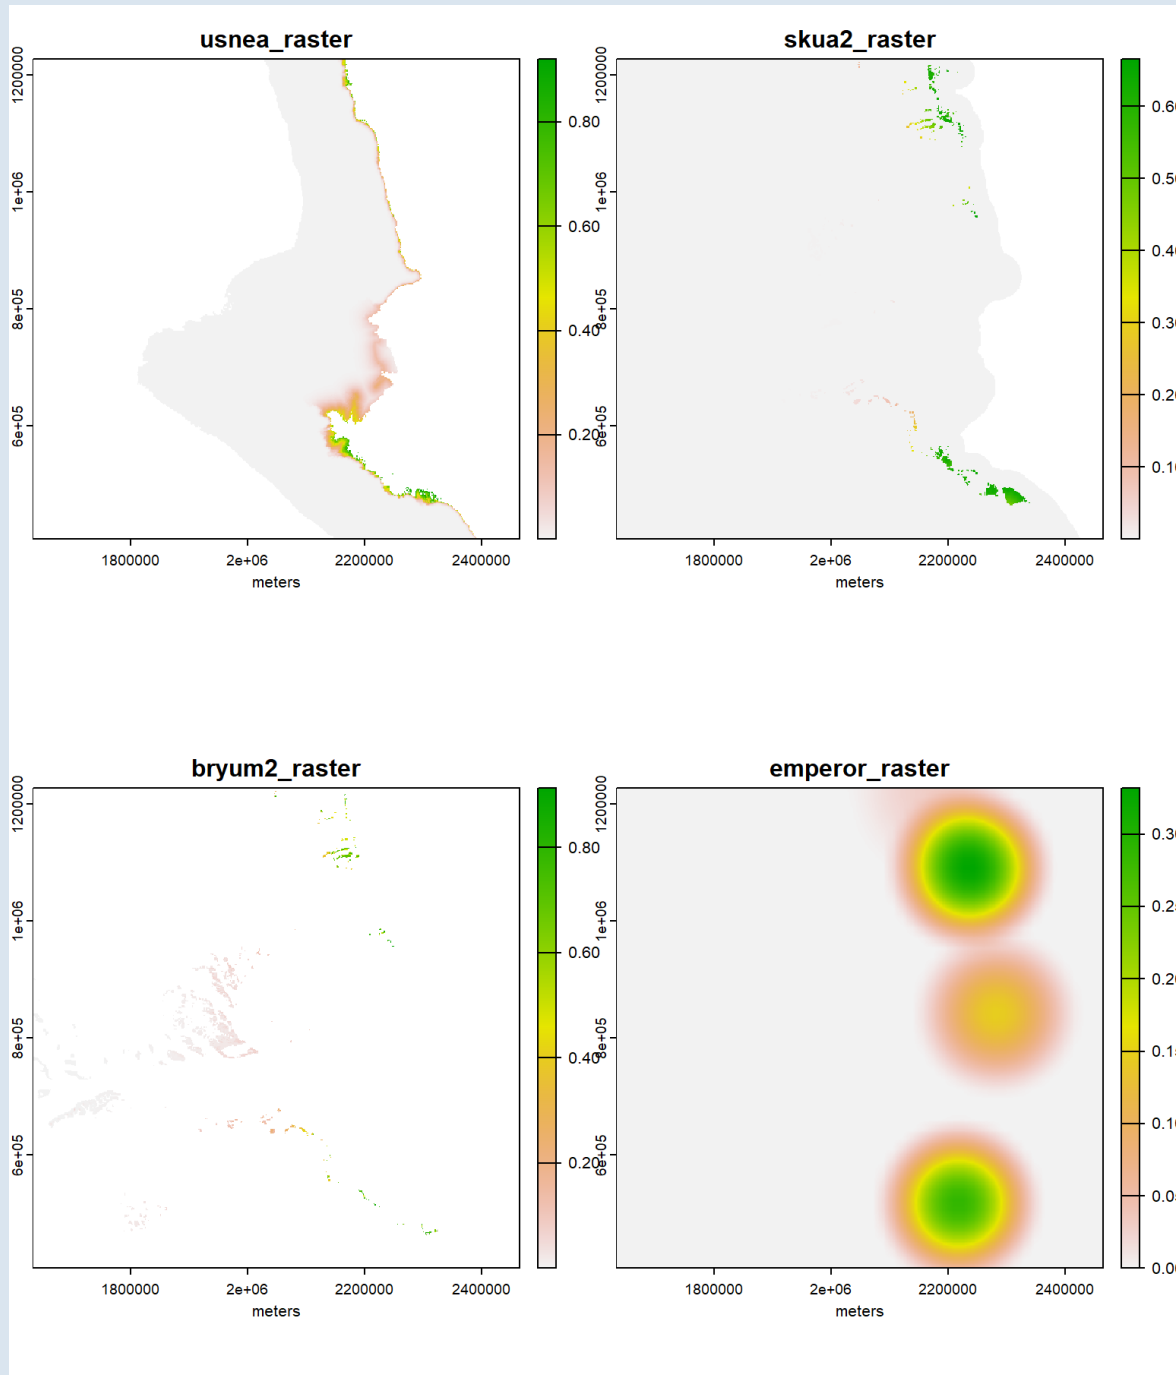

Fretwell et al. 2021

Resampling & Standardize Raster Data

- ✓ We need to ensure that all rasters have the same **dimensions, resolution, extent, and projection**.
- ✓ Click on **section 2.4.4** to resample the emperor penguin and Bryum data to standardize the format.
- ✓ Then, click on **section 2.4.5** to combine all species data into a single layer. You will now see maps of four species.

Species Data

3. Feature representation

- ✓ Click on **section 3.1** to create a null problem
- ✓ Then, click on **section 3.2** to evaluate the extent of the species.
- ✓ **Section 3.3** will convert the planning units into square km to describe the total extent of the species in the planning unit layer.
- ✓ Click on **section 3.4** to plot a histogram of the representation of the species in existing protected areas (i.e., ASPAs).

Feature representation

Scenarios for prioritization analyses

	Relative Target	Lock in existing ASPAs	Cost
Scenario I	10%	No	No Cost/Equal
Scenario II	30%	Yes	Management Cost

Human-readable code

Mental model

```
problem <-  
  data +  
  objective +  
  constraints +  
  decision type +  
  solver  
  
solution <- solve(problem)
```

Code

```
p <-  
  problem(areas, feats) %>%  
  add_min_set_objective() %>%  
  add_relative_targets(0.1) %>%  
  add_binary_decisions() %>%  
  add_rsymphony_solver()  
  
solution <- solve(p)
```

4. Prioritization 1st Scenario (Equal/No Cost)

- ✓ Click on **section 4.1.1** to create the 1st prioritization problem
- ✓ Then run **section 4.1.2** to solve problem

here we will state the prioritization problem

```
p1 <- problem(planning_unit, species, cost_column = "nocost") %>%  
  add_min_set_objective() %>%  
  add_relative_targets(0.1) %>%  
  add_binary_decisions() %>%  
  add_rsymphony_solver()
```

solve problem

```
s1 <- solve(p1)
```

4. Prioritization 1st Scenario

- ✓ Click on **section 4.1.3** to plot the solution map

4. Prioritization 1st Scenario

- ✓ Click on **section 4.1.4** to evaluate target

A tibble: 4 × 9

feature <chr>	met <lgl>	total_amount <dbl>	absolute_target <dbl>	absolute_held <dbl>	
usnea_raster	TRUE	3069.9549	306.99549	318.32969	
skua2_raster	TRUE	1664.9076	166.49076	310.60229	
bryum2_raster	TRUE	656.2078	65.62078	68.65025	
emperor_raster	TRUE	18434.4948	1843.44948	1851.98718	

4 rows | 1-5 of 9 columns

4. Prioritization 1st Scenario

- ✓ Click on **section 4.1.5** to create a histogram

5. Prioritization 2nd Scenario (Management Cost + “Locked in” + 30% target)

- ✓ Click on **section 4.2.1** to create the 2nd prioritization problem
- ✓ Then run **section 4.2.2** to solve problem

we will add a management cost + lock in existing ASPAs + seek a 30% representation target

```
p2 <- problem(planning_unit, species, cost_column = "mgtcost") %>%  
  add_min_set_objective() %>%  
  add_relative_targets(0.30) %>%  
  add_locked_in_constraints("locked_in") %>%  
  add_binary_decisions() %>%  
  add_default_solver()
```

print the problem

```
S1 <- solve(p2)
```

5. Prioritization 2nd Scenario

- ✓ Click on **section 4.2.3** to plot the solution map

5. Prioritization 2nd Scenario

- ✓ Click on **section 4.2.4** to evaluate target

A tibble: 4 × 9

feature <chr>	met <lgl>	total_amount <dbl>	absolute_target <dbl>	absolute_held <dbl>
usnea_raster	TRUE	3069.9549	920.9865	963.6687
skua2_raster	TRUE	1664.9076	499.4723	1174.7166
bryum2_raster	TRUE	656.2078	196.8623	206.8852
emperor_raster	TRUE	18434.4948	5530.3484	5530.3641

4 rows | 1-5 of 9 columns

5. Prioritization 2nd Scenario

- ✓ Click on **section 4.2.5** to create a histogram

Prioritization Multi Scenarios

- ✓ Click on **section 4.3** to combine two prioritization results

Proposal 1

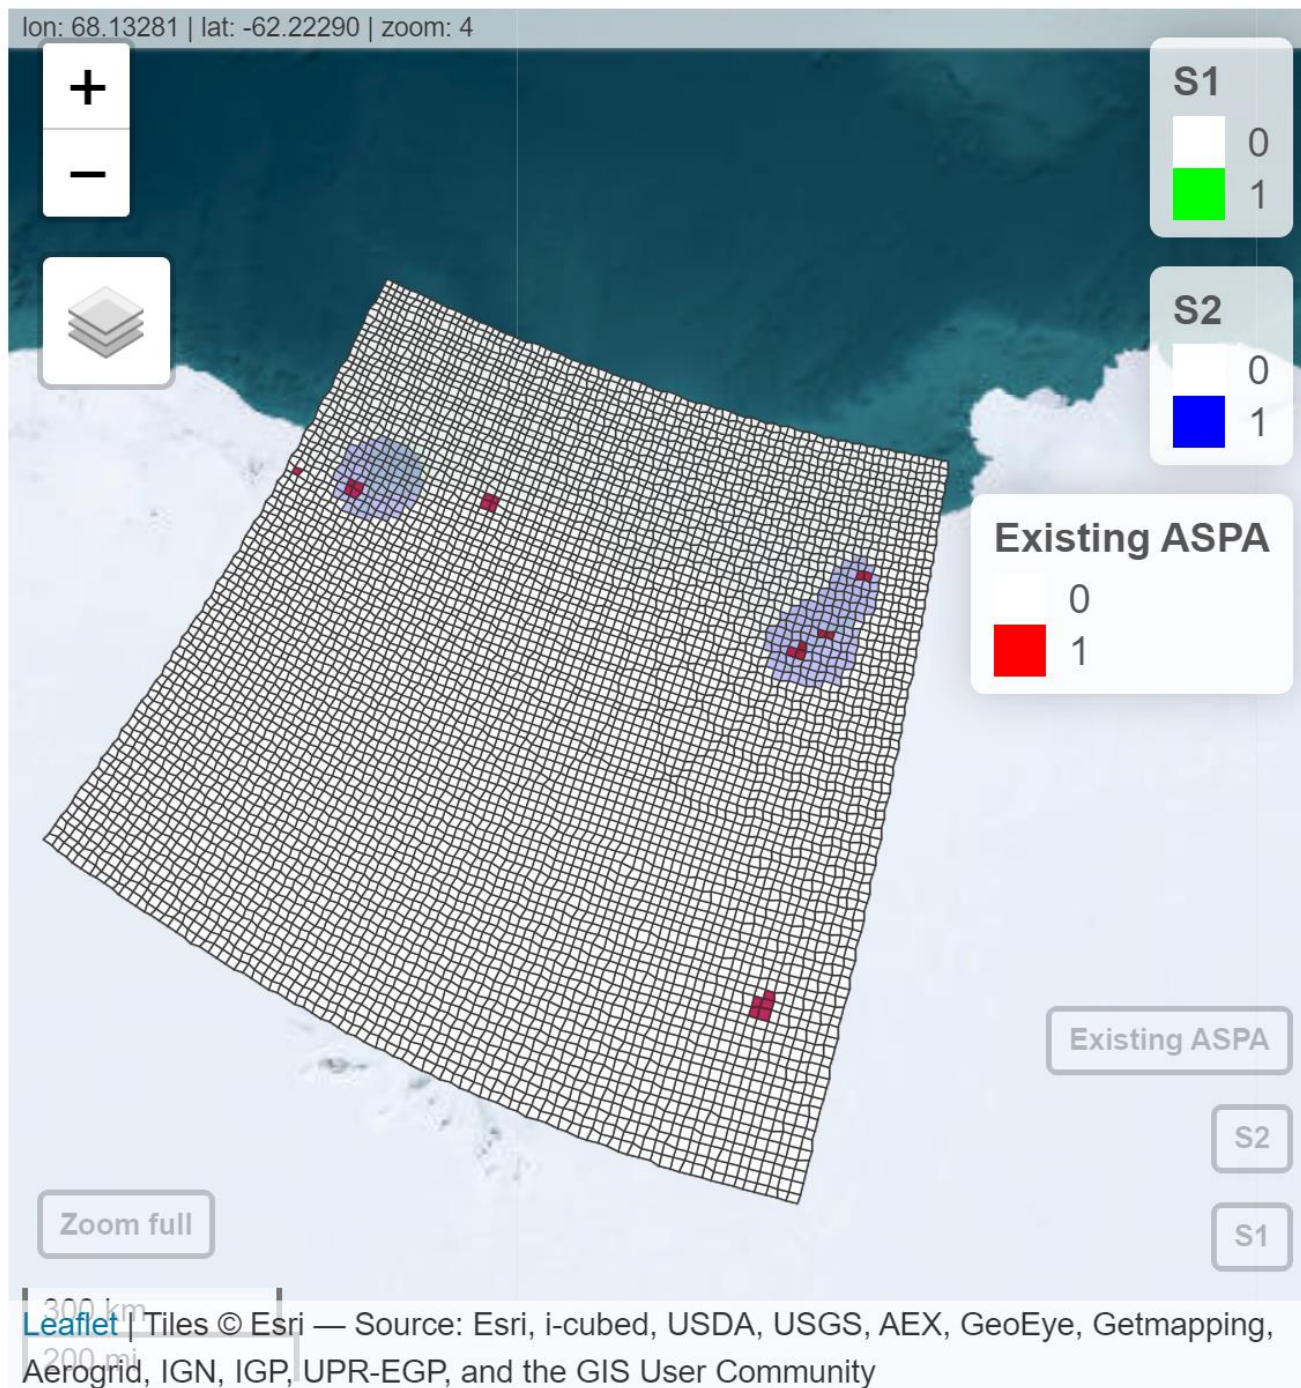

Proposal 2

Existing ASPA

Any questions?

Congratulations! You have completed the tutorial.

And we welcome any feedback
